Data unlocks and enhances the value of the tax function

For tax departments, analysis and planning is critical to making strategic decisions. Here, tax professionals can add value by determining ways to lower corporate tax liabilities and reduce exposure to risk. A constantly changing regulatory landscape only increases the complexity of analysis and elevates its importance.

Common data issues faced by tax professionals include:

Data migration

Moving and organizing data to make it consumable for tax calculations and models

Data volume

Large volumes of source data are stored in multiple, disparate systems not easily accessible to the tax team.

Data manipulation

Tax departments are often reliant on spreadsheets to create complex calculations and workbooks.

How are tax departments using historical data to perform diagnostic analytics and generate predictive insights and actionable items?
