

# Identity and Access Management On Demand

Protect your business and information assets

KPMG Managed Services

In today's digital landscape, Identity and Access Management (IAM) is a crucial function for all organizations; get it wrong and business-critical operations can grind to a halt. Yet, many information security teams face difficulties in adapting to the ever-evolving IAM landscape.

As digital transformations drive increased utilization of cloud-based services, various risks arise, such as managing sensitive data accessed from different geographic locations and multiple devices. Additionally, the need to consistently apply security patches and upgrades to tackle potential vulnerabilities poses a significant challenge.

Simultaneously, cyber leaders must contend with priorities such as heightened user experience expectations, process excellence demands, cost reduction pressures, data breach risks, stricter regulatory compliance, skilled talent scarcity, and mounting IAM complexity.

58% of tech executives report that their cybersecurity teams are behind schedule in responding to these challenges<sup>1</sup>

As finding and retaining cost-effective, skilled talent becomes more challenging, IAM resources are increasingly burdened by day-to-day risk management and operational issues, inhibiting their capacity to engage in innovative strategic improvements for mission-critical business processes.

**Forward-looking companies are making managed services part of their playbook.**

**They're working with providers who bring a comprehensive solution—from consulting on strategy to implementation, ongoing enforcement, continuous monitoring and evolution.**

Potential benefits:

**Skilled, global resources**

**Reduced risk**

**Lower, predictable costs**

**Compliance enablement**

**Ongoing support**

**Agile capabilities**

## Why KPMG

KPMG Identity and Access Management (IAM) on Demand enables you to continuously evolve and derive business value from your IAM solution by providing business and technical day-to-day operations.

Our subscription-based service standardizes your IAM processes; reducing risks and ensuring our combination of advanced technology and experienced resources address issues consistently, efficiently, and cost-effectively.

**Our managed services for IAM focuses on delivering outcome-based results for business and technical operations that help build resilience and trust.**

We provide a single point of contact for all aspects of your IAM program:

### IAM Business Operations

Continuous management and tracking of business processes, such as executing access review campaigns for SOX or access management for adding/removing access to applications.

### IAM Technical Operations

Day-to-day management of the health of the IAM solution such as application monitoring, data feed integrations, application administration and patching, and incident management.
